

GOOGLE CLOUD RAPID AGENT HACKATHON • GITLAB BUCKET

CodeGuard

DORA Article 9 merge-request review agent — Gemini 3 reasoning, human-gated GitLab writes, auto-remediation, and a blocking CI gate.

Gemini 3

Agent Builder

GitLab MCP

Cloud Run

THE PROBLEM

DORA Art.9 review is manual, late & inconsistent

Every change to a financial system must protect ICT — **encryption, logging, authorization, audit trails, safe errors**. Today:

- ▶ **~23 minutes** of a senior engineer per merge request
- ▶ Happens **after** the code is written — or not at all
- ▶ One unencrypted card field = a **regulatory breach**

THE SOLUTION

Every MR, checked before production — with a human in control

CodeGuard **reasons** over the diff with Gemini 3, **proves** its fixes, **acts** through GitLab (gated), and **opens the remediation MR** itself.

~45s

vs ~23 min manual

31x

faster

100%

eval recall

HOW IT WORKS

Two agents, a 5-step mission

Browser / CI / Webhook → CodeGuard (Cloud Run)

1 read MR + diffs → GitLab (MCP / REST) GitLabReader

2 pre-scan rules → checks.js DORAAuditor

3 reason + confirm → Gemini 3 DORAAuditor

4 decide pass / warn / block

5 fix-verify (re-scan)

| — human approves ▼ —

execute → comment · label · block · training issue · ledger

remediate → fix branch + remediation MR

WHY IT WINS

More than an AI linter

Auto-remediation

Detects *and* fixes — opens a real MR with verified changes.

Fix-verification

Never claims a fix it can't prove — re-scanned clean by the rule engine.

Blocking CI gate

Non-compliant code can't merge; the pipeline turns red automatically.

Evidence + Ledger

SHA-256 audit artifact per scan; obligations exportable to CSV.

BUILT ON THE REQUIRED STACK

Every box checked — and then some

REQUIREMENT	CODEGUARD
Gemini 3	gemini-3-flash-preview (AI Studio / Vertex)
Google Cloud Agent Builder	agent.json — GitLab MCP + humanInTheLoop
GitLab via MCP	judged agent (MCP) + REST mirror
Cloud Run	deployed · public · europe-west1
Reproducible eval	100% recall / 100% fix-verification

PROOF IT'S REAL

A live URL, not a slideshow

- ▶ **[TESTED: YES]** — real GitLab MR → BLOCK, 3 confirmed DORA/GDPR/NIS2 findings, ~8s
- ▶ A **red CI pipeline** with CodeGuard's verdict in the build log
- ▶ A real **auto-fix MR** opened by the agent
- ▶ Click it yourself → 🎬 **Judge Mode**, zero credentials

Fits the workflow developers already use

- ▶ **Who:** banks, insurers, fintechs & their ICT third parties — all in DORA scope
- ▶ **Where:** GitLab MR review + CI — zero new tools to learn
- ▶ **Value:** 23 min → 45 s, consistent enforcement, examiner-ready audit trail by default
- ▶ **Beyond DORA:** the same engine maps to NIS2, GDPR Art.32, PCI-DSS

THE ASK

DORA Art.9 — from a 23-minute chore to a 45-second gate

Human-controlled, audit-ready, on every merge request — and it **fixes** what it finds.

| "Compliance isn't a vibe — it's a hash." 🛡️
